PV Input / Solar Charging

Environmental / Mechanical Specs

Seems nice, compact, easy to install, but this unit is not completely installed so I can't say how it will turn out.

Yes the MPP Solar Inverter is a beast ... amazingly well built. But what you're really getting is the decades of SOLAR KNOWLEDGE behind the products. I was having a wiring problem - and not only did they send me a diagram - but they built a Combiner Box ... who does that anymore? That's truly old school customer support - and that's what required in an innovative industry! Thanks Shop Solar Kits!!!

This is my 2nd LV2424. These units are perfect for moderate loads and when chained together, they become a powerhouse.

The setup is nearly plug-n-play. Start with a battery, solar and finally mains (which can easily be pigtailed from a wall outlet). Input your specific battery parameters, such as type of battery, cut-out/in voltages and, voila, you're in business. There is a great peace of mind knowing that you truly have uninterruptible power, whether its full time use or for emergency stand-by.

Only thing I wish I had done differently was I wish I had gone with the 48 volt setup

Works well but takes a lot of research to figure out how to set it up. There's a lot of conflicting ideas on internet and "experts" don't seem to be available to help. Manual not a big help. Unit uses about 50 watts to run internal fans etc so it's a significant draw on batteries overnight.

Thank you for the review!

Due to demand I suppose, the inverter took nearly a month to ship. They said it was due to delays at the port getting the shipment unloaded. Despite this annoyance, Shop Solar Kits remained friendly and helpful.

Install is coming along ... Will revise when it's up and running.
