I will start off this post by saying that I am NOT an electrician & recommend consulting one for any electrical/ power requirement concerns your company has. However, a recent client request left me stumped & wanting to learn more.

Power generally only comes up in one of two contexts in my business:

But what constitutes an above normal power usage? To begin answering this question, it is important to understand a few definitions/ equations:

Below is the wattage of a few common household/office items:
