3 phase victron inverter

Virtually unlimited power thanks to parallel operation. Up to 6 Quattros can operate ...

When coupled with a GX device (e.g. Cerbo GX) you can monitor and control your Quattro and system or systems" locally (LAN) or remotely via the internet from anywhere in the world, using the free VRM app and free VRM portal website. Access can be from a phone, tablet, laptop or PC for multiple operating systems. There is no end to the level of control, from adjusting your Quattro to auto starting a backupgenerator and more...

Today we released a firmware update for the Multi RS that adds the option to configure three phase systems. (!).A major next step towards making the RS a full featured Victron inverter/charger.

Note that paralleling multiple units on one phase is not possible. Hence, maximum system size with Multi RS-es is 3 x 6000VA units.

All three phases must be powered before the system connects to the AC-input.

Besides above common settings, there are four more that relate to redundancy. Both parallel redundancy, for the Inverter RS, as well as redundancy for three phase systems in which there is no three phase load.

Note that the "Accept phase rotation"-option, as recently added to our VE.Bus inverter/chargers, is not yet available for the RS. Its a niche feature that is planned for later. More details on that feature [here](#).

Just like a single phase unit, also a three phase system can be firmware updated without losing power on the AC output. Make sure that there is stable AC input available when starting the update, since in such case the unit currently being updated will switch to AC-passthru mode.

Firmware files and detailed change log are available [here](#) on Victron Professional.

Updating the RS can be done using either VictronConnect or directly from the VRM Portal website.

A new version of the VictronConnect App, adding this new v1.13 firmware version, will be released in a few weeks. Until then, the manual firmware update method or remote update via VRM can be used.
