Pipeline/Security Monitoring

Cold Weather Environments

Second Level: Passive blade pitch control, with 45° of movement and 2 reaction speeds, limits power output.

Third Level: Electronic control system activates electromagnetic induction brakes.

ZONHAN wind turbines are made of strong cast steel that makes them durable. ZONHAN wind turbines can withstand harsh environments like strong winds and cold weather using high performance NdFeB permanent magnet, the alternator is high efficient and compact. The unique electro-magnet design makes the bonding force and cut-in speed very low.

The SD3 is particularly popular as an off-grid, battery charge system and for integration with alternative technologies as part of a hybrid set up.

Available as Grid-Tied and Battery Charge, the SD3 is designed with ease of integration in mind. The intelligent design delivers consistently high performance in all wind speeds. Our unique over-speed protection system ensures continuous energy generation during extreme winds which provides better value to users and operators. As wind speeds increase, the SD3 will maintain output and performance compared to alternative wind turbines which need to brake themselves in strong wind conditions.
