400 watts solar panels suppliers

The best of EcoWatch right in your inbox. Sign up for our email newsletter!

We work with a panel of solar experts to create unbiased reviews that empower you to make the right choice for your home. No other solar site has covered renewables as long as EcoWatch, which means we have more data and insider information than other sites.

Note: In July 2024, SunPower notified dealers it would be halting all new shipments and project installations. The company also noted it would "no longer be supporting new Leases and PPA sales nor new project installations of these financing options."

Just a decade ago, 250- to 300-watt (W) solar panels were the standard size for most installations. But with rapid technological advancements, 400 W panels are becoming the most common (and preferred) solar panel rating. High-quality manufacturers, like Maxeon and QCells, have panels that are almost exclusively larger than 400 watts.

Best American Made – Q cells Q. Peak Duo BLK ML-G10+

Most Value for Money – Canadian Solar HiKu dual cell PERC CS3N400

SunPower designs and installs industry-leading residential solar and storage solutions across all 50 states. With a storied history of innovation dating back to 1985, no other company on this list can match SunPower's experience and expertise.

SunPower earns its position as the top national installer on our list for a handful of reasons: It installs the most efficient solar technology on the residential market, offers the most expansive service area and backs its installations with a warranty well above the industry standard. All the while, SunPower pioneers sustainability efforts within the industry.

If that weren't enough, SunPower systems come packaged with products all manufactured in-house by its sister company, Maxeon. This means that your panels, solar cells, inverters, battery and EV chargers are designed to work together and are all covered under the same warranty.

SunPower's biggest downside? Its high-efficiency panels are considerably more expensive than most of its competitors' products. However, its powerful panels are workhorses that make up for the initial cost with more backend production (think about this like spending more money for a car that gets more miles per gallon).

400 watts solar panels suppliers

We like Blue Raven Solar because it understands that, for most homeowners, the cost of solar presents the biggest barrier to entry.

For that reason, Blue Raven Solar developed an innovative solar financing plan that offers in-house, flexible, zero-money-down options. The results speak for themselves, as Blue Raven Solar is now one of the fastest-growing solar companies in the nation and was recently acquired by SunPower. Its BluePower Plus+ plan (exclusive to Blue Raven) mimics the flexible structure of a lease while still providing the greatest benefits of owning your system.
