Turnaround Solar Makes Happy

[See Related Items Below] Solar Panel roof or ground racks are site specific options that are not included with the base package. Scroll down the page to view options.

Building codes may vary from state to state and AHJ (Authority Having Jurisdiction)so be sure to check with your local code officials for their code requirements as well as your local utility company for their interconnect agreement requirements.

IQ makes solar installations smarter. Simply single-bolt the Enphase IQ7PLUS Microinverter to your roof or ground rack. Then plug your Engage Cable from the microinverter. Finally connect the DC leads from the solar panels to the microinverter and you are rocking and rolling with the first panel of your 4.3 kW Mission Solar Grid-Tie Kit

Production = 828 kW Per Month ● Assumptions: 345 Watt STC Panel Rating [Factory Rating] @ 5 Sun Hours (Average).

Technical Specifications for Enphase IQ7PLUS Microinverter Kit: ● IQ7PLUS-72-2-US60-Cell and 72-Cell Solar Panel Rated ● The IQ 7+ Microinverters have a 97% CEC efficiency with AC peak output power ratings of 290 watts. For a single-phase, 240VAC application, you can install a maximum of 13 IQ 7+ Microinverters on 1 20A branch circuit.

The maximum number of microinverters that can be installed on each AC branch circuit can be found in the microinverter's datasheet. The maximum number of IQ7PLUS(TM) single-phase (240V) microinverters that can be installed on a 20A circuit is 13.

The Enphase IQ7PLUS(TM) Microinverter (IQ7PLUS-72-2-US) is designed to be used with the Enphase IQ Envoy(TM) (ENV-IQ-AM1-240). The Enphase IQ Envoy is a communication device that provides network access to the solar array. The IQ Envoy collects production and performance data from the Enphase IQ Microinverters over on-site AC power lines and transmits the data to Enlighten through an internet or cellular modem connection. The IQ Envoy is capable of monitoring up to 600 Enphase IQ Microinverters and up to 39

Enphase IQ Batteries.

● Microinverter - Solar panels on the roof or ground absorb sunshine and convert it into direct current power (DC). Sitting directly behind the panel is the Enphase Microinverter which plugs into the panel and Enphase cabling. AC Power is then run to a junction box or combiner then to the main panel.
