5 kva inverter with battery price

The Victron MultiPlus 48V 5kVA is an inverter/charger – Lightning fast transfer time, easy setup, remote-monitoring capable and the reliability you can trust from Victron

The MultiPlus is designed with hybrid PowerAssist technology, which steps in to boost your power output from a generator or shoreside supply when needed, being able to deal with high-demand situations. This allows for a stable power supply even if the AC input fails to produce the needed power as well as ensuring that the AC source is never overloaded.

During grid failures or shore/generator power disconnections, the Victron 48V MultiPlus-II 5kVA can take up the loads. This allows for operation without disruption even with no grid (less than 20 millisecond transfer). When paired with a GX device, the Victron MultiPlus 48V 5kVA can be monitored or programmed remotely. Setup for the VRM (Victron Remote Monitoring) is free and easy, with simple steps on the Victron site.

Is this multiplus-ii model also UL listed? I saw that it has better capability for grid-tie

No, the UL model will have a different SKU when the testing has completed.
