GivEnergy design and manufacture their own inverters, batteries and state-of-the-art management system and monitoring platform which combine to offer an exceptional storage package.

The GivEnergy Gen 3 hybrid inverter offers all of the benefits of the GivEnergy Gen 2 hybrid inverter while benefiting from a cleaner design discretely enclosing the connection ports. The 5kW Gen 3 hybrid inverter comes with an increased backup power output capability of 5kW when Solar and Battery are used in tandem. Additionally, the Gen 3 has an increased max input current per string of 15A allowing for higher current panels to be utilised in your system designs and an increased MPPT range.

Installers must now offer an SPD to the homeowner for them to decide whether they would like one installed. Giv inverters do not come with an SPD inbuilt which means that installers will need to offer their own.

Growatt SPH TL3-BH-UP is three-phase hybrid inverter designed for residential and small industrial applications. Available capacities: 4kW, 5kW, 6kW, 7kW, 8kW, 10kW. A properly designed hybrid system including SPH inverters and a battery pack and other accessories can maximize the self-sufficiency of a solar system and reduce electricity bills.

The Growatt SPH 5000TL3-BH-UP inverter is a three-phase hybrid inverter designed for residential and small industrial applications. It is known for its affordable price and high quality. The inverter is certified for the global market and is commonly used in pro-consumer installations. It comes in various capacities ranging from 4kW to 10kW.

One of the key features of the SPH inverter is its backup output for EPS (Emergency Power Supply) circuits.

To further enhance its functionality, Growatt offers the option to pair the SPH inverter with ARK energy

5kw hybrid inverter price

storage systems. These energy storage solutions have capacities ranging from 7.68 kWh to 25.6 kWh. By combining the Growatt SPH inverter with ARK energy storage, users can maximize self-consumption of the energy generated. Instead of sending excess energy to the grid, it is stored in the batteries, reducing reliance on energy prices set by the distribution company. This setup promotes greater energy independence.
