Tiny, light and durable A01 VTX, comes with a port to connect with FC and mounting holes to fix on the canopy, convenient for installation. Compatible with Beta75X FPV (3S), Beta75X HD (3S), Beta85X FPV (4S), Beta85X 4K and HX100.

Only support frequency and power change through the SmartAudio interface.

Method 1: Use the OSD menu.

Enter the OSD menu by radio transmitter sticks (Pitch Stick UP and Yaw Stick Left). Then FEATURES -> VTX SA to change the frequency and power.

Method 2: Use the Betaflight GUI command.

For example, set the frequency to 5865 and power to 200mW (1 for 25mW / 2 for 200mW);

PitMode allows racers to power up their video transmitters during race events without interfering with other racers and still having the ability to change VTX settings or do some testing. Range is limited to 2-3m and transmission happens on the selected frequency.

How to active the PitMode: Enter the OSD menu by radio transmitter sticks. FEATURES -> VTX SA -> CONFIG -> PIT FMODE. Then select the PIR status.

How to exit the PitMode: As the same above, select the OP MODEL to FREE to close the PitMode. Then the VTX will recover to the 25mW power status.

Free AU delivery for orders over \$150 and great international rates
