Find out how much CO₂e emissions you could reduce on your vessel by applying ABB's technology. Fill in the main operational details of your vessel. The calculator will estimate how much CO₂e emissions you can expect to reduce.

ABB has secured an order with the shipbuilding company All American Marine to supply a hybrid-electric propulsion system for the new ocean sampling catamaran for the Orange County Sanitation District (OC San) in California.

Consortium to develop a sea voyage and port call optimization solution, which will be part of the Decarbonization through the Digitalization in Shipping (DECARDIS) project

ABB invited Esmond Yong, Sales Director, APAC, Routing Services, ABB Marine & Ports, based in Singapore; Sallum Andaya, Senior Route Analyst, Routing Services, ABB Marine & Ports, based in Manila, Philippines; and Capt. Kevin Knott, Fleet Performance Manager at BW LPG, a world leader in liquefied petroleum gas (LPG) shipping, based in Singapore, to share insights into the weather routing landscape in APAC. We discussed the regulations, trends and challenges, and what makes ABB Routing Services unique – as well as other steps BW LPG, a global player with a fleet of around 40 vessels, has taken to improve fuel efficiency and reduce emissions.

Megawatt Charging System (MCS) is a universal standard for high-power DC charging, collaboratively developed by pan-industry expert

ABB's technology can be found in use across the marine industry – be it revolutionary propulsion technology, or smart systems that assist operators in more efficient and safer vessel handling.

The pioneering cycloidal propulsion concept received the accolade at a prestigious Madrid ceremony attended by Queen Letizia of Spain
