There's a scorching heatwave coming and a good fan is the next best investment after an ice bath in the garden shed and an outdoor grill. If you don't want to Wim Hof your way through the next heatwave, try one of the best fans money can buy.

See, open windows won't do much if the weather's heavy and your walls are built for chilly winters. Luckily, these fans can add soothing circulation to even the stuffiest of spaces.

From desktop fans to powerful floor fans, we've included all kinds of coolers in this guide. There are options fit for every space and budget, including a couple of wireless fans for movable ventilation when the mercury starts to rise.

The Dyson Purifier Cool Autoreact (buy now) is a powerful blade-free floor fan projects purified air all around your room. Sizeable and expensive, it's the ultimate choice for cooler, cleaner streams.

The Stadler Form Fan Otto (buy now) is crafted from renewable bamboo and does a great job of moving air around.

The Meaco 260c (buy now) is a compact, portable, and efficient battery-powered fan at a very reasonable price.

Dyson's bladeless blowers create cooling currents with the help of hidden motors, projecting powerful outputs through their open portals. While that technical wizardry is all well and cool, it's not much use if the breeze still makes you sneeze. Luckily, this upstanding fan also purifies for cleaner streams. Sensors inside analyse the air for polluting particles, while filters trap 99.95% of microscopic nasties to stop them from blowing up your nose. So you can safely dial up the draught for a 350-degree arc of allergen-free airflow.

It's not hyperbole when I say the Meaco 260c cordless fan might just be one of the best things I've ever bought. It measures just 26cm tall and 16cm wide, making it perfect for tight spaces like your desktop or for travelling.

Air conditioning screwfix

What makes it truly remarkable, however, is its ability to run solely on battery power for up to 14 hours, and, when it does need to be recharged, it's done via USB-C (so no need to have extra cables lying around).
