

Algeria grid modernization

Algeria grid modernization

Arlington, VA - Today, the U.S. Trade and Development Agency awarded a technical assistance grant to Algeria's transmission system operator, Soci t  Alg rienne Gestionnaire du R seau de Transport de l'Electricit  ("GRTE"), to modernize its electricity grid and facilitate the country's transition toward renewable energy. GRTE is a subsidiary of Sonelgaz, Algeria's national electricity and gas company.

"USTDA's support of this project exemplifies our commitment to supporting climate-smart infrastructure around the globe," said Enoch T. Ebong, USTDA's Acting Director. "GRTE's goal of a renewable energy future is a priority that USTDA is proud to support. USTDA's assistance will also create opportunities for GRTE to benefit from cutting-edge American technologies as it embarks on its planned grid upgrades."

The technical assistance will help GRTE plan the development of an automated distributed control system which will allow it to integrate renewable energy from solar and wind sources into its grid. This system will increase the efficiency of GRTE's grid while strengthening its management of Algeria's distributed power generation resources.

"Our partnership with USTDA will pave the way for us to modernize and digitalize our electricity network using the expertise of American companies that are leaders in this field," said Mr. Nabil Yousfi, GRTE's Chairman and CEO. "Our electricity transmission network will play an important role in Algeria's transition toward green energy. USTDA's technical assistance will help ensure that we have the right plan, and it will be an opportunity for our young engineers to gain valuable project planning experience."

Charg  d'Affaires at the U.S. Embassy in Algiers, Gautam Rana, said: "We are proud to support this opportunity to not only bolster the bilateral relationship between our two countries, but also to join in the efforts to secure reliable, clean, and renewable energy for the people of Algeria."

This project advances the goals of USTDA's Global Partnership for Climate-Smart Infrastructure, which connects U.S. industry to major clean energy and transportation infrastructure projects in emerging markets.

U.S. businesses interested in submitting proposals for the USTDA-funded technical assistance should visit

The U.S. Trade and Development Agency helps companies create U.S. jobs through the export of U.S. goods and services for priority infrastructure projects in emerging economies. USTDA links U.S. businesses to export opportunities by funding project preparation and partnership building activities that develop sustainable infrastructure and foster economic growth in partner countries.
