Sympower partners with leading industry players to shape a net-zero future. We unlock revenue streams and stabilise grids by maximising the value of flexibility across energy markets and industries, as it is crucial for the energy transition that all assets are flexible. We utilise our advanced and automated flexibility capabilities to temporarily adjust the power of systems, machines and processes when the grid is out of balance. By using our non-intrusive software solutions, our customers enhance the value of their energy assets and provide an essential service that enables a fully-renewable...

SolarNow distributes aspirational solar products and appliances sold on credit (up to 24 months), for which no current rural distribution channels exist and which previously seemed unaffordable.

SolarNow brings together effective sales management, consumer financing and modern products through a scaleable and commercially sustainable business model. The model has proven to be scaleable and therefore has tremendous potential for social impact. Through smart partnerships with funders and suppliers we continue to focus on what we are good at: bringing proven products to people who otherwise ha...

Jungle applies Artificial Intelligence to increase the uptime and performance of electromechanical machines. Built on existing sensors and data streams, our technology enables machine owners & operators to squeeze more performance and uptime.

We have productised our services, tooling, and AI into a web application, Canopy. We operate at large scale -handling millions of data points per day, and provide the results of our always-on predictive models, together with advanced investigative tools to some of the most sophisticated companies in the world.

We are developing a new design of solar panels. This design follows the principles of circularity by being modular and therefore repairable and easily recyclable (at high value).

Since the current solar industry permits human rights transgressions in the upstream supply chain, we are also working towards setting up a supply chain for our panel that is free of human rights violations. Through this, we aim to advocate for a new "fair" era in the solar industry.

Amsterdam solar energy companies

We use open-source principles to allow contributors globally to replicate and improve our designs. Our designs are published under a...
