The 21 AMP countries represent a diverse set of African countries, each with their own energy market specificities and development contexts: large and smaller markets; Anglophone, Francophone, and Lusophone countries; small island developing states; and countries in post-crisis contexts.

Solar-battery minigrids hold great potential to boost electrification — powering households, key social services such as health centers and schools, and businesses, driving economic growth. UNDP modelling estimates that minigrids will be the lowest-cost approach to bring electricity to 265 million people in AMP's 21 countries by the year 2030.

AMP Participating Countries

The following countries are currently participating in the Africa Minigrids Program.

Angola

Burkina Faso

Comoros

Djibouti

Eswatini

Ethiopia
