Myanmar's government has announced a plan to increase conventional and renewable energy generation to address electricity shortages. Reports from Burmese exiles, however, detail increasing issues for the construction of large scale solar projects tendered prior to the military coup in February 2021 and Chinese inverter manufacturer Sungrow said the project it secured in the country's first tender has been canceled.

According to the latest statistics from the International Renewable Energy Agency, the country reached an installed PV capacity of 80 MW at the end of 2021.

The Ministry of Information (MOI) and the Ministry of Investment and Foreign Economic Relations (MIFER) of Myanmar last week issued a joint press release stating that the government is planning to boost renewable energy development and increase foreign investments despite the threat of new economic sanctions.

The two ministries said the announcement comes in response to recent unspecified media reports about energy shortages in the country and exits of some foreign energy companies.

"The recent temporary shortage of power was caused by a surge of global liquefied natural gas (LNG) prices, exacerbated by the Russia-Ukraine conflict and a weaker kyat currency, as well as terrorist actions linked to the People's Defensive Force (PDF)," the government said referring to the armed wing of the democratically elected National Unity Government (NUG) which was ousted by a military coup on February 1, 2021.

"Apart from advocating a boycott of utility payments since 2021, PDF terrorists blew up power lines from the Lawpita hydroelectric plant in Kayah State. These actions contributed to outages which caused hardship to ordinary citizens and small businesses in particular."

The government also said it will accelerate power generation in the country from oil and gas sources through new investments.

As for solar development, the two ministries said the 40 MW Letpanhla and 30 MW Nyaungbin Gyi solar projects have been completed and 13 solar power projects totalling 370 MW have been launched.

"Three more solar power projects which will generate 390 megawatt are also planned. Special efforts are being made to promote floating solar projects, rooftop solar projects, and small and medium-sized projects

wherever possible. Tenders are also being called for 18 solar power projects that can generate 635 MW. These are in addition to ongoing negotiations for 11 solar projects which will generate 300 MW that have been invited," their statement reads.

Despite the optimism of Myanmar's authorities, the development of large scale solar appears to be encountering difficulties. Chinese PV inverter manufacturer Sungrow announced last week in its financial results that the project it secured in Myanmar's first solar tender held in September 2020 has been canceled.
