

# Battery types comparison chart

## Battery types comparison chart

Energizer provides a battery comparison chart to help you choose. There are two basic battery types: Primary batteries have a finite life and need to be replaced. These include alkaline batteries like Energizer MAX®; and lithium batteries like our Energizer®; Ultimate Lithium(TM).

This is a list of commercially-available battery types summarizing some of their characteristics for ready comparison.

By 2030, the top 10 cobalt-producing countries will account for 96% of the total mined supply, with just two countries--the DRC and Indonesia--contributing 84% of the total. This infographic compares the six major types of lithium-ion batteries in terms of performance, safety, lifespan, and other dimensions.

Brand Comparison. Lauri Nieminen's charts comparing different brands of disposable batteries. (There's not a big difference between manufacturers, but there are big differences between battery types.) Battery University. A whole site dedicated to educating people about batteries.

- o Most rugged battery type. All steel plate construction
- o Resistant to: Electrical abuse, overcharging / over-discharging
- o Physical abuse, extreme temperatures, shock & vibration
- o Withstand temperature excursions from -40°C to +70°C
- o Fast recharge with no adverse effects
- o Impervious to ripple (a VRLA killer)
- o Low maintenance

Long-lasting and reliable power Energizer®; offers a full range of long-lasting ...

Learn about the six major types of lithium-ion batteries, their advantages and disadvantages, and how they power electric vehicles and energy storage systems...

Rechargeable batteries play an important role in our lives and many daily chores would be unthinkable without the ability to recharge. The most common rechargeable batteries are lead acid, NiCd, NiMH and Li-ion. Here is a brief summary of their characteristics.

Table 1 compares the characteristics of the four commonly used rechargeable battery systems, showing average performance ratings at time of publication. Li-ion is divided into different types, named by their active materials, which are cobalt, manganese, phosphate and titanate. (See BU-205: Types of Lithium-ion)

Missing from in the list is the popular lithium-ion-polymer that gets its name from the unique separator and electrolyte system. Most are a hybrid version that shares performance with other Li-ion. Also missing is the rechargeable lithium-metal, a battery that, once the safety issues are resolved, has the potential of becoming a battery choice with extraordinarily high specific energy and good specific power. The table only addresses

## Battery types comparison chart

portable batteries and excludes large systems that resemble a refinery.

\* Topping charge is applied on a battery that is in service or storage to maintain full charge and to prevent sulfation on lead acid batteries.

The material on Battery University is based on the indispensable new 4th edition of "Batteries in a Portable World - A Handbook on Rechargeable Batteries for Non-Engineers" which is available for order through Amazon .
