

Berlin energy storage applications

The aim of the EnergiespeicherPLUS programme is to drive forward the expansion of photovoltaics in Berlin and to increase the share of renewable energies in electricity consumption, even in times of low sun and low wind. This benefits climate protection, as CO₂-emissions can be avoided. The Berlin Energy and Climate Protection Programme provides subsidies for the investment costs of electricity storage systems if a photovoltaic system is installed at the same time. The IBB Business Team GmbH implements the program. Since 1 January 2020, an electronic application for funding can now be submitted quickly and easily to the IBB Business Team GmbH under be put.

Energy Senator Ramona Pop Every Berliner can make a contribution to the energy transition in our capital city. We support this with our Energy Storage PLUS funding programme. I am pleased about the great interest. Since October, over 200 preliminary applications have already been submitted. Every new photovoltaic system helps us get one step closer to our goal of becoming climate neutral."

We subsidise the purchase and commissioning of solar energy storage systems of up to 15,000 euros. If the storage system has a forecast-based operating strategy, a bonus of 300 euros is added. The prerequisite for a subsidy is that a photovoltaic system is purchased and commissioned at the same time as the storage system. The subsidy can be combined with other funding, e.g. from the Funding programme for business-oriented electromobility or from the green roof funding programme, can be combined. All owners of buildings in Berlin can apply for the funding. 3.1.2020 | Source: Berlin Senate Department for Economic Affairs, Energy and Operations

Deadline extension! Instead of 31.12.2020 the project submission ends up to and including Friday, 22.01.2021.

Prize for architecture and urban development

The State of Hesse, represented by the Hessian Ministry of Finance and the Chamber of Architects and Town Planners of Hesse jointly offer the award under a specific theme every three years. The theme for 2020 is "Sustainability".

The competition is looking for innovative projects and plans in the field of sustainable planning and building that have been implemented in Hessen in the last five years or are currently being implemented.

The award procedure consists of two stages and is aimed at planners from Germany and abroad in the following fields Architecture, interior design, landscape architecture and urban planning as well as to private and public building owners.

Projects can be submitted up to and including 22. January 2020 at be submitted.

In phase 1, an international jury of experts will nominate a short list and in phase 2, after an on-site visit, select the award winners in four award categories. The award ceremony is planned for May 2021.

"Why do the same dreary apartment blocks have to be built everywhere?" asks F.A.Z. economics writer Nadine Oberhuber in Your post from 26.04.2017. She thinks "unambitious" is still the most harmless word of the viewers for the block architecture". As the main cause she quotes her F.A.Z. colleague and architecture critic Niklas Maak who observes a "radical economization of building", similar to the Bundesstiftung Baukultur.
