If you drive an electric car and want to charge it at home, you will need to install an EV charger. Upgrading from a standard home charging station to a level 2 charger is highly recommended as it will provide faster charging. Some brands even state that the upgrade can be up to 5 times quicker in some cases.

Based from our research, we found that the best EV charger is the ChargePoint Home Charging Station, which is a level 2 charger that's UL listed and is rated at 16-50 amps of power. However, if you want to save a few bucks the JuiceBox Pro 40 is the best alternative.

From our research, we based our EV charger recommendations upon a number of factors which includes their specification as well as all of their features. As the market continues to get more saturated, we are continuing to review and update this article with the best that the top manufacturers have to offer.

When it comes to the different types of charging cables, you have the choice of a 120V (level 1) or 240V (level 2) charger. Choosing a level 2 charger is the best option as it provides faster charging, which is far more desirable.

The technology used in electric car charging stations is improving each year. They are becoming more powerful and include extra features that make them easier and more efficient to use at home. If you have the budget available, upgrading to a level 2 EV charger is highly advised as the performance benefits compared to standard chargers makes it an excellent investment.

As electric car technology is evolving, we are constantly researching and updating our recommendations. Below is a list of the best EV chargers that can be installed at your home to provide fast charging of your electric car.

The ChargePoint EV Charger is a popular option that's offered as a hardwired or plug-in charging station. It also features an integrated WiFi connection that allows you to connect to the brand's smartphone application for real time data feedback. Whilst using the application, you are able to schedule charging times, track all charge activities and other useful data about your car's charge status.

A great feature about the ChargePoint Charger is that it uses the standard J1772 connector, which means that it's compatible with all electric vehicles on the road.

Other features of the ChargePoint CPH25 EV Charger include:

Overall, the ChargePoint CP25 is the best EV charger on the market that makes use of a smartphone application and provides plenty of power for fast charging. Considering all of the features and its charging performance, it offers relatively good value for the money too.
