

Best level 2 ev charger

Best level 2 ev charger

The best level 2 home EV chargers

After two years of standardized testing with two EVs and 16 (and counting) of the most popular home charging products, seven products made the cut below. You can't go wrong with any of these charging stations, but we've highlighted their differentiating features.

The Tesla Wall Connector was already the best choice for most Tesla drivers. Now there is a new Universal Wall Connector that works with J1772 plugs too. Regardless of your EV brand preferences, this charging station is a smart choice for the long term as the Tesla (NACS) connector will become the de facto standard in North America post-2025.

We like the integrated cord management features of this product, and the cord is easy to handle in any climate but robust enough to handle 48 amps without overheating.

EVIQO surveyed 1,800 existing EV owners during their product development, and it is evident that many common charging complaints were addressed. The hardware is good all around, with quality components used in the cord and J1772 connector. Very generous cord lengths on both input and output.

The app and smart features are where EVIQO really shines. Both scheduling and electricity rates can be fine-tuned to fit most EV drivers' specific situations, resulting in accurate and clear charging cost reports. Full review.

ChargePoint is a reputable brand in public charging as well as home charging. Priced at the higher end of the spectrum, the Home Flex is well-built, includes smart cable management, and a fully featured app. We were impressed when the app detected our utility provider by ZIP code, and automatically calculated accurate charging costs using up-to-date TOU electricity rates.

Compatible with all EVs on the market, the ChargePoint Home Flex is our top choice for EVs with large-capacity batteries. The ChargePoint Home Flex is a top seller on Amazon and for good reason. As of March 2024, ChargePoint offers a version with a native NACS connector too. Full review.

Need something solid but without the bells and whistles? LENZ has a great value Level 2 charging station with a robust metal enclosure. The LENZ product can be installed (quickly and easily) inside or outside.

While it may not have connectivity options, most modern EVs will have built-in scheduling options. If you're looking for something uncomplicated with a NEMA 14-50 wall plug, LENZ is a great choice.

Best level 2 ev charger

We were impressed with the quality of the materials of the enclosure, the cable, and the J1772 connector. This charging station also managed to stay very cool while operating at 40 amps. But the cord holster could be improved for cable management. Full review.

Leviton is a brand with a long history in home electrical products, and their EV charging products demonstrate their commitment to safety. The EV48W is UL-listed and EnergyStar-certified, and comes with a high-quality charging cord and a durable J1772 connector. Our only complaint is that at 18 feet, the cord could be a little bit longer.
