Best lifepo battery

Deciding on the best LiFePO₄ or LFP Battery for your solar system, RV, or boat is an important and often expensive decision. Battery technology is rapidly advancing, and with more batteries now on the market, it has become more confusing.

In this article, I'll review what I look for in a good battery. Then, I'll explain the advantages and disadvantages of a LiFePO₄ battery and provide some good battery choices.

A LiFePO₄ battery is a lithium battery. Technically speaking, it uses lithium iron phosphate as the cathode and graphitic carbon electrode with a metal back as the anode. This type of lithium battery is ideal for vehicle use, backup power, etc.

Although a LiFePO₄ battery may have higher upfront costs, several reasons exist for considering these batteries for your long-term plans.

No battery is perfect, and although battery technology improves every year, there are still a few things to consider before purchasing a LifePO₄ battery.

Check out this LifePO vs. Lead-Acid batteries article if you purchase your first LifePO₄ battery. The article offers good real-world information.

There are a lot of battery choices, and the batteries below are from well-known brands with a reputation for quality and durability. I'm often remote, so I must know I can rely on my battery. The batteries below will not let you down when you need them.

The BattleBorn Battery is one of the most well-known brands in this group. If you have owned an RV or boat or have an off-grid system, you have heard of Battle Born batteries. Battle Born is middle-of-the-pack in price and capacity, but not performance. This is a no-frills, well-made battery known for its durability and performance.

The 12V 100A Battleborn battery is lightweight at only 31 pounds and does not come with carry straps, so you might find it more cumbersome than some of the others listed here. The dimensions are comparable to the other batteries in this group.

The Battleborn has a sealed environment, a durable nylon case, and large, strong epoxy terminals, making this a good battery for wet environments or mobile environments like trucks or RVs with a lot of movement and vibration.

Best lifepo battery

The large terminals on the Battleborn are also well-suited for a system where several batteries may be run in parallel and a large number of amps are pushed.

In addition to its cells being UL 2054 listed, which is very stringent testing, Battleborn does its own quality checks. Like all of the batteries on this list, the parts are supplied by China, but Battleborn manufactures them in Nevada, where the safety checks are done. Their warranty and technical service are also located in Nevada.
