Get up to 3 quotes for solar, batteries or EV chargers

Every year we ask installers in the SolarQuotes network which batteries they would trust in their own family homes. We ask two questions to tease out the best batteries in Australia for both big-spenders and the budget conscious.

In 2023 we added a third question:

Interestingly, the same three brands took the podium for all 3 categories – just in a different order.

Tesla wins for a third straight year with the Powerwall. Tesla Powerwall 2 is a brilliant home battery with 13.2 kWh of storage in a sleek, compact housing and a built-in battery inverter that will AC couple as a retrofit to almost any grid-connected solar power system in Australia.

Tesla's monitoring app is a joy to use, and the optional time-based control algorithm maximises battery savings on a time-of-use tariff and works brilliantly.

The Powerwall's home backup just works and sets the standard for all other battery and battery inverters.

Surprisingly, Tesla's share of 'best battery' votes has declined over the three years we've run this survey.

I suspect this is due to some installers frustrated with Tesla raising the price over those 3 years. Elon Musk morphing into a complete wazzock over this time probably doesn't help, either.

Happily for Australian buyers, the cost of Powerwall may have peaked. With last week's price cut, you can fully install your first Powerwall from about \$16,500.

I suspect Tesla will find ways to keep reducing the Powerwall's price, and I expect a step change in price with the Powerwall 3. If Tesla can manage to build a Gen 3 Powerwall that beats other batteries on \$-per-kWh, they are going to fly off the shelves even faster than they do now. Other home battery manufacturers should be worried.

BYD's stackable, cobalt-free LiFePo4 'B-Box' is a great home battery and is directly compatible with the fantastic Fronius GEN24 hybrid inverter via DC coupling.
