The first thought you might be wondering is there are now pocket-sized portable EV battery chargers that you can keep in the boot of your new EV. This isn't quite the case. At least, not yet. The EV charger scene is still developing with EU mandates looming and firms all over the automotive landscape are battling to meet demands. This has meant a load of new public chargers have been set up, but not quite everywhere yet.

According to Zap-Map, there are over 70,000 public charging points throughout the UK (as of September 2024), which is a 41% increase since September 2023. So, it's fair to say that the technology and infrastructure is growing, yet still isn't suitable for every motorist. If you've made the switch to an EV, then having places to charge is a needs-must.

Of course, there are areas where there are higher concentrations of EV chargers, such as London, but the principle stands because EV charger hotspots align with population density. However, there are certain scenarios where a portable charger comes in handy, such as if you find yourself parked up on holiday without

a wall box. Portable EV chargers can allow for slower, but more manageable charging where the infrastructure hasn't yet been reached.
