

## Bucharest electricity bills

Day-ahead electricity prices in Bucharest; Historical prices (past 30 days) Historical ...

You can pay utilities bills in Romania in various ways. For most of them you will need to have the actual paper invoice. But most of them can also be paid via bank transfer - provided you have all the needed details on your bill - client code and invoice number.

On the invoices the bank account is listed on the upper left part of the bill. Many bills also have barcodes that can be used at ATM or bank branches. Check with your bank for more information on these services. Bucharest, the company that provides and distributes electricity is called Enel- the former state-owned Electrica Muntenia.

Every month a collector comes to read your meter and returns a few weeks later to hand you your bill, which you can pay straight away. Alternatively, you can pay your Enel bill at their payment centers, Customer Relations Centres (CRCs) with payment centers, post offices and at Citibank with a payment order. With an account, you can pay this and other bills at various bank branches, and also through an online bank transfer.

Make sure you always write your client number and the invoice number in the subject! Enel has also introduced a service which allows you to give the company your current meter reading by phone. Dial toll free: 0 800 07 08 09, enter your client number, which can be found in the center of the bill ("codul dvs"), then the last month's reading, and the new reading.

Electricity Payment Office- Sector 6 Address: 74-92 Iuliu Maniu Blvd. Phone: +40 21 430 09 04

Romania's energy sector is characterized by a diverse mix of sources. A significant portion of its electricity generation stems from hydroelectric power, coal, and nuclear energy. The country has a notable capacity for hydroelectric energy, thanks to its geographic features, particularly the Carpathian Mountains and the Danube River.

Coal, despite environmental concerns, remains a key component in Romania's energy mix. The country also relies on nuclear power, with the Cernavod? Nuclear Power Plant being a major contributor. This diversification helps in maintaining a stable electricity supply.
