

# Central africa energy storage for microgrids

Central africa energy storage for microgrids

Intelligent insights & conversations with global power industry professionals

This special interest group is for professionals to connect and discuss all types of carbon-free power alternatives, including nuclear, renewable, tidal and more.

Lili Francklyn has worked in renewable energy, utility and climate-related marketing communications positions for over ten years. She is currently Editor of the Microgrid News at HOMER Energy by...

African Minigrid Developers Association (AMDA) Will Begin to Collect Minigrid Performance Data

Microgrid Development Plans for Selected African Countries

What Will it Take to Spur Minigrid Development in Other African Countries?

This content was provided by HOMER Energy, the developer and distributor of the HOMER software, the global standard for energy modeling tools that analyze solar-plus-storage microgrids and other distributed energy projects. HOMER software determines engineering and economic feasibility by simulating complex off-grid and grid-tied distributed energy systems that combine conventional and renewable power, storage, and load management. Learn more at [homerenergy.com](#), and read more content like this at [homerenergy.com/blog](#)

Renewables and microgrid technologies have such a great potential to create some opportunity for reliable energy delivery for these developing and industrializing nations, giving them the ability to leapfrog the traditional grid system

"The solar microgrid will only allow one fluorescent bulb and cellphone charging, but that should be enough for poor people, right? I mean, they wash their clothes on rocks in the river, and everything..."

The arrogance of renewables advocacy knows no bounds.

Here's what really happens when rich Greenpeace kiddies show up in India with their plastic solar panels and build a microgrid: villagers chant "We want real electricity, not fake electricity!" - then replace it with coal.

"M.V. Ramana, a physicist at Princeton University who has studied energy access in India, questioned the ethics of foisting an expensive solution on the poor, who've historically contributed so little to global warming.
