

Charging leisure batteries for caravans

Charging leisure batteries for caravans

Regardless of the battery type, there are 4 ways of charging a leisure battery in a camper:

Charging leisure batteries in motorhomes, RVs, campervans, and caravans is essential.

Not only is it essential to recharge them so you can continue to use them, but if left too deeply discharged for too long, their lifespan will shorten.

There are a few different ways to charge a leisure battery. Campervans, motorhomes, and RVs often use more than one method, providing recharging options no matter where they're camped.

If you maintain the batteries' charge, you can help prolong their life and provide the power you need to keep gadgets and appliances running.

A good all-round campervan electrical system includes at least 2 or 3 of these charging methods. A versatile setup is ideal for those who travel, use campgrounds occasionally and enjoy camping off-grid.

Before we get into the detail of how to charge a leisure battery, let's consider how campervan batteries work and get recharged.

The leisure batteries we install in our campers aren't the same as the starter battery under the hood.

Unlike starter batteries, a deep cycle battery (or leisure battery) is designed to release energy in a steady flow over a longer period.

They can discharge a lot of their energy in a longer, deeper energy drain, which would kill a starter battery quickly.

This post focuses on how to charge these leisure batteries. They're often called house batteries, 12v batteries, or deep cycle batteries, just to keep us on our toes!

There are 4 types of leisure batteries on the market:
