

Copenhagen electricity policy

This emerging district is designed to be the world's foremost smart energy laboratory at full scale. This district heating and smart-grid integration shows how electricity and heat, energy-efficient buildings and electric transport can be integrated into one intelligent, flexible and optimized energy system. Discover.

The CPH 2025 Climate Plan is holistic and includes specific targets and initiatives in the four key areas - energy consumption, energy production, mobility, and city administration initiatives. The Climate Plan is developed in three implementation phases; 2013-2016, 2017-2020, and 2021-2025 with evaluation in between the phases.

The city, which plans to become fully carbon neutral by 2025, has addressed energy concerns by turning towards centralized biomass heating, solar and wind power, and smart street lighting to greatly reduce its energy consumption and limit carbon emissions.

The short-term goal for The City of Copenhagen is a CO₂ neutral energy supply by the year 2025, and the long-term vision for Denmark is a 100% renewable energy (RE) supply by the year 2050. In this project, it is concluded that Copenhagen plays a key role in this transition.

3rd Edition Renewable Energy Systems - A Smart Energy Systems Approach to the Choice and Modeling of Fully Decarbonized Societies

Department of Development and Planning, Aalborg University

The Danish capital, Copenhagen is moving quickly towards a zero-carbon future.

Wind farms, citywide efficient heating systems, energy efficiency, and the development of public transportation networks and bike routes are some of the initiatives helping the city in its aim to be carbon neutral by 2025.

Copenhagen electricity policy

Currently, 36 per cent of commutes to work or school in the Danish capital are made by bike, and more than 20,000 cyclists enter the city centre at peak hours, filling nearly 250 miles of cycle tracks.
