This portable power station is quite nicely made. It has a metal shell and uses high quality materials overall. It's sturdy and robust with a nice finish quality. It is small and light and the built-in handle is appreciated.

Second one we ordered so we can confidently run two CPAP's all night. Light was pleasantly unexpected feature. Really easy to use in our travel van. Like the portability and handle makes easy to carry. Arrived early.

Unboxing was a surprise! This unit is so compact and the build quality is excellent. Perfect size for camping. I received it with 3/5ths of a charge.

I bought the item about a year ago and it worked ok but then I started having issues. Jennifer helped me resolve the issue. I definitely feel confident buying more from them and they have a strong warranty program! Excellent all around.

Compared to other lithium-ion batteries, LiFePO4 batteries are more stable and can handle fluctuations in the charging voltage. The battery provides up to 2000 cycles for the generator with a service life of 10 years.

With the 105W fast charging technology, the portable generator can be fully charged within 3.5 hours by using PD60 W and AC (45 W) at the same time. You can also charge the product separately via the power supply (requires 8 hours), the DC input (with cigarette lighter), the PD mode (requires 6 hours), and the solar panels (recommended 18 V, 3 A, 60 W max, the idle voltage should be below 24 V) alone.

Features 1 x AC port, 4 x DC ports, 2 x USB ports, 1 x QC3.0 USB port, and 1 x PD quick charging port, this 320 Wh power station is suitable for charging phones, tablets, laptops, digital cameras, fans, CPAP, and many other devices, completely covering your needs on a trip.

The battery generator is equipped with LED lights with two modes. The high light mode can be used as lighting for outdoor fishing, camping, car repair, and indoor power outage. The SOS mode can help you quickly get help in dangerous situations.

For sensitive devices such as computers, the generator protects these devices with a pure sine wave inverter to produce stable and electrical energy. Built-in BMS and passed UL test to ensure better safety.
