Find the right program for your home or business

PG& E's demand response programs are designed to enable customers to contribute to energy load reduction during times of peak demand.

Contracted third parties offer programs for customers to save or earn money by adjusting energy usage.

With one exception, you can only participate in one energy incentive, energy reducing, peak hour or direct bidding program at a time. You must unenroll from one to enroll in another.

To learn more about energy incentive programs offered by companies other than PG& E, visit third-party incentive programs for demand response.

Take control of your electric rate and help conserve California's power grid when needed most. SmartRate is risk free and backed by our Bill Protection guarantee.

The Leap platform provides fast, automated access to energy markets for your distributed energy resources. Our software-only solution makes it easy for your business to get paid while deploying virtual power plants to create a cleaner, more resilient electric grid.

A no-cost, no-risk service that notifies you when electricity prices spike in your neighborhood and pays you to save energy during those times.

By enrolling in WatterSaver, your electric water heater can automatically take advantage of lower electricity rates, so water is heated at the least expensive times of day. Plus, you can earn a \$50 gift card enrollment bonus and an additional \$5 gift card credit for every month you participate.

Sign up for a PG& E program or select a program from another demand response provider. Note that some private companies contract with PG& E, while others are independent.

This aggregator-managed program operates with a Day-Ahead option and runs May 1 through October 31.

Some private companies contract with PG& E. Visit each company's website for details on their incentive programs.
