Danish Data Center Industry

Port House - Vendersgade 74 (Building B)

The DRUPS (Diesel Rotary Uninterruptible Power Supply) system is a combination of a diesel generator set and a UPS unit, which provides a complete backup power solution while also reducing emissions. DRUPS systems are always online, ensuring reliable, continuous power supply for critical infrastructure, regardless of power grid interruptions.

They are essential for maintaining uninterrupted power supply for critical operations such as life support in hospitals, data centers, production sites, energy plants, telecommunications, office buildings, airports, and more.

A professional approach to project management, combined with expertise and a trusted supplier, ensuring control and predictability for successful delivery.

The "BOS Power Project Excellence" initiative drives continuous improvement and builds professionalism, so that we are better equipped to serve you.

Key elements of Project Excellence:

Visit us to discuss the journey to net zero and explore the latest in engine technology and low-emission solutions. Our sales team and technical experts from BOS Power are excited to meet you!

Sales | Power Generation

Want to know more about our technologies? Download our brochures for more information.

The new natural gas genset offers the highest power density and the highest kilowatt-per-square-foot ratio in its class.
