Dominica solar industry

The Government is committed to make Dominica the first climate-resilient nation by 2030 and is working to create favourable conditions for future sustainable investments in renewable energies. As the island most advanced in geothermal explorations, Dominica is already a leader in renewable energy in the Caribbean. The government is seeking to further grow its renewable energy sector by attracting private participation to advance the country's renewable energy ambitions.

Dominica already has substantial geothermal, solar and wind power capacities making the island an ideal location for energy generation from these resources. Those looking to invest in renewable energy will find a welcoming and supportive environment in Dominica.

The Government of Dominica offers a very generous fiscal incentive package for investment in this area. These include a reduction or exemption of import duty and VAT on inputs, along with a reduction in corporation tax.

Financing is also available through AID Bank for installation of renewables in a development.

Sustainable Earth : Solar pioneers in Dominica since 2007

Seventeen years later and in the aftermath of 2017's destructive tropical storms and hurricanes, and after living the disrupting episodes of load shedding by Dominica's unique utility provider, DOMLEC, the importance of self-sustainable renewable energy is undeniable. In our today's lives, electricity is essential.

Sustainable Earth Dominica has partnered with reputable international manufacturers to bring quality solar products to the Caribbean. Based in Dominica, we offer products, installation and maintenance services. We offer a range of solar systems specially designed and tested for tropical conditions, from the most compact one able to power a simple phone/laptop/ tablet and a few bulbs, to larger solar systems tailored to power entire homes or businesses such as resorts.

Be it grid- tied or Off-Grid, or even better, << Grid-Assist/Hybrid >> as we consider the best systems for Dominica, Sustainable Earth has the solar system you need. A good solar installation is not an addition of solar material, but is an integrated solar system where all components can speak and exchange together; automatically. And designed for the local environment. Not a one size fits all designed in the US, Europe or China. That's the main difference.

At Sustainable Earth, we bring the best brands to the Caribbean!

Dominica solar industry

A small island it may be, but Dominica's aspirations are far from little.

With 2017's Hurricane Maria serving as a catalyst, the Government of Dominica have since embarked on a journey towards climate resilience. Immediately after, Prime Minister Roosevelt Skerrit announced that the island would become the "world's first climate resilient nation", a feat that has since proven to be an upward battle but incredibly necessary all the same.
