Dps turnkey generators

Distributed Power Solutions (DPS) offers fuel efficiency, turnkey solutions, quick ...

Distributed Power Solutions (DPS) is supplying baseload power generation for ...

Rely on Distributed Power Solutions for expert turnkey services, fuel efficiency, ...

DPS proudly supports a variety of industries, providing customized power solutions to meet specific energy demands. Our expertise extends to industries such as oil and gas, data centers, utilities, mining, cryptocurrency, engineering, construction, production, refining, petrochemical, pipelines, and gas processing.

Distributed Power Solutions is a full-service, turnkey power solutions company with 24/7/365 support services. We can take a project all the way from mobilization to demobilization to ensure our customers can focus on their operations. DPS can provide any level of service you require, from the power turbine rental alone to transportation, engineering, design, setup, operator training, and balance of plant such as electrical transformers, electrical distribution, fuel handling, fuel storage, fuel filtration, etc.

Our team has the expertise to ensure power to your project is set up and run efficiently and cost-effectively.

DPS offers flexible, customized solutions to get our customers the best solutions for their project needs. We work with LNG and CNG suppliers to provide fuel-efficient natural gas even when your project does not have access to a pipeline nearby. Our turbine generators can operate on a wide range of gases and a variety of distillate (diesel) fuels. Our preferred fuel is pipeline-quality natural gas (90% plus methane content), but we can also operate on low-energy gaseous fuels (digester gas) and higher-energy fuels that contain heavy hydrocarbons (associated gas).

We provide the most cost-efficient solutions to our customers with industry-leading fuel efficiency and low emissions. This translates to lower fuel and operating costs while improving power reliability for our customers.

Our team understands that some projects or emergencies require a quick turnaround time. DPS has experience deploying and setting up major power installations in as little as a week with reliable operation. Check out our project profiles to see how our team pulls together to get projects up and running in a short amount of time and sometimes under extreme conditions.

DPS has both turbine generators and reciprocating engine generators to support many kinds of projects and many different industries. Our fleet is mostly powered by Caterpillar engines which allows us to support customers on a global scale.

Dps turnkey generators

Find out how the Distributed Power Solutions team mobilized, installed, and commissioned 50 MW of temporary power in 35 days during a global pandemic and with temperatures over 120°F.
