If you want to calculate your bill, depending on the selected parameters and quantities, you can do that with the Calculator.

The total price for electricity paid by customers includes the following:

The fee paid by the end users/producers is a one-time payment and amounts to 50% of price obtained on the basis of the fees for connection to low voltage/medium voltage network, and the remaining 50% is provided from the tariffs for the use of the distribution network. The Supervisory Board of JP EPBIH adopted a decision with which it prescribed the methodology for determining of the fee for the connection of a building to the distribution network.

Landing page for the first BiH Price Comparison Tool,, which helps households and small commercial customers to choose their electricity supplier and save on their electricity bills.

For the first time, household consumers and small businesses in Bosnia and Herzegovina (BiH) can compare electricity prices and shop around for the best deal.

Local regulators from BiH, prominently supported by USAID, publicly launched an online electricity price comparison tool, (link is external), in December 2018. This one-of-a-kind tool will help customers to better understand the electricity sector and, more importantly, save money on their electricity bills.

The first of its kind in the region, the application provides customers with instructions for choosing the cheapest supplier in the electricity sector. The application also provides basic information about each of the electricity suppliers, consumer rights and responsibilities, and other educational and useful tips for lowering consumption and energy efficiency.
