AMMAN -- Though Jordan's energy sector strategy, announced in 2020, set a goal to raise the percentage of renewable energy contribution to electricity generation to 31 per cent by 2030, the Kingdom is continuing efforts to increase this rate to 50 per cent, Secretary-General of Ministry of Energy and Mineral Resources Amani Azzam said on Wednesday.

Azzam's remarks came while delivering Jordan's speech, as co-president of Union for the Mediterranean (UfM), at the opening of the annual meeting of UfM energy platforms, which began its activities in the Spanish city of Barcelona on Wednesday, the Jordan News Agency, Petra, reported citing a ministry statement.

"Jordan is currently revisiting its comprehensive strategy for the energy sector to achieve the new target, and working to support transformation projects towards electric transmission and green hydrogen production," Azzam said.

Jordan, she noted, has begun to implement the required technical, legislative and strategic steps in this direction.
