

Electricity prices

A new release of the World Energy Prices datasets was just published.

TheEnergy Pricesdata service is composed of two main databases:

Please refer to the availability files to check what combination of products/sectors/time/countries are included in each database.

Single user or multi-user?

Single and multi-user licences can be purchased directly online. These licences are exclusively for a single company or group and do not allow you to do work with third parties or put the data in a model for which the derived data would be visible or available to third parties (see below).

A single user licence is appropriate as long as only one person can access or view the data. If other users were able to view even the results of the calculations in a shared internal tool then you would need a licence to reflect all the users u2013 if they are in different locations then a global licence would be needed.

We would therefore expect all multinationals to purchase the global licence (unlimited users, multiple locations).

Do I need a contract or permission?

If you intend to use the data in any type of modelling for the purpose of creating derived data or derived products, and any services to distribute or display such derived products you need to sign an Agreement and pay a fee. The licences available online are exclusively for a single company or group and do not allow you to do work with third parties or put the data in a model for which the derived data would be visible or available to third parties (see below).

Can the data or any result of their processing be shared with third parties?

IEA, Energy Prices, IEA, Paris [https://](https://www.iea.org/terms-of-use), Licence: Terms of Use for Non-CC Material
