renewable energy and energy efficiency. These costs are rolled into both fixed charges (i.e., monthly customer charges) and variable charges (i.e.,  $\text{\$/kWh}$  that you use). While fixed charges will remain the same from month to month, the portion of variable charges on your bill each month will change based on how much electricity you use. As a result, there are two ways to reduce your bills: by either using less electricity or by reducing the cost of electricity, by installing solar for instance.

The easiest way to compare the cost of electricity from one region to another is to look at the electricity rate. Residential rates in the U.S. range from 6  $\text{\$/kWh}$  to 71  $\text{\$/kWh}$  depending upon where you live, what types of power plants provide your electricity, and when during the day or year you're consuming electricity.

The average residential electricity rate in San Marino, CA is 34  $\text{\$/kWh}$ , which is 6% higher than the average electricity rate in California of 32.18  $\text{\$/kWh}$ . The average residential electricity rate in San Marino, CA is 83% higher than the national average rate of 19  $\text{\$/kWh}$ .

Solar panel systems help you save money by reducing your monthly electric bills. Although a \$50 or \$100 electric bill might not seem like much when you pay it each month, those bills add up quickly over ten, twenty or even thirty years: if you pay \$100 per month in electricity now, you'll pay over \$93,000 on electricity over the next thirty years!
