Energy efficiency new zealand

By enabling energy users to access and implement energy efficiency, we can ...

As well as offering co-funding, we support your energy saving and emissions ...

Raising the energy efficiency of residential, commercial, and industrial products sold ...

Insights - EECA - Energy Efficiency & Conservation Authority | EECA

About - EECA - Energy Efficiency & Conservation Authority | EECA

Energy efficiency policy includes Warmer Kiwi Homes and Minimum Energy Performance Standards (MEPS).

The government has allocated \$28 million for the Māori and Public Housing Renewable Energy Fund, which has been established to trial small-scale renewable energy technologies. The funding is being allocated to selected projects over 4 years until mid-2024 through an open application process.

This initiative is supporting local-level renewable energy generation, which is leading to:

These renewable energy solutions can result in improved health outcomes for those households involved in this project. They also provide improved resilience, for example, when the electricity grid is disrupted due to weather-related events.

The fund is trialling new ways of generating energy and integrating it with existing electricity networks, while supporting the government's commitment to renewable energy generation and its climate change goals.

MBIE is leading this initiative and is working closely with Kōinga Ora, Te Puni Kōkiri, EECA and the Ministry of Housing and Urban Development.
