

Energy management paris

The Energy and Finance Certificate is designed for students who have a strong interest in the economics of energy, energy-related financial issues, and climate change or who are willing to move to these sectors for a career.

Created in 2005 under the sponsorship of Deloitte, the Energy & Finance Chair is a cooperation between Deloitte and Soci t  G n rale Investment and Corporate Banking which started in 2010 on the HEC campus and today offers training and research programmes to over 300 students from all around the world every year.

The Energy sector plays a major role in today's world economy.

The cumulative needs for new energy supply infrastructure is mind-blowing and represents an investment of up to US\$ 38 trillion over the next 25 years which will be required to ensure a secure, more efficient, and hopefully greener, energy supply to the world. The financing of this global investment will be an unprecedented challenge for producers, consumers, banks, governments, regulators and capital markets.

This huge expenditure will take place in a context of record uncertainty: energy markets have been fully deregulated in the mature economies; the implementation of climate change response policies and the emerging of a carbon price in a growing number of large countries are adding a new layer of volatility into already volatile energy prices; and geopolitical tensions are exacerbated as the whole world moves West to East.

Our energy future is staring us all in the face: the environment will be filthy, energy will be costly and geopolitical tensions between producers and consumers will be strong.

In the face of these developments, corporations will have to review their strategy and business models going forward, individuals will have to change their behavior, and governments to adopt visionary policies.

The Energy & Finance certificate at HEC Paris is a formidable opportunity for participants to confront the above issues, and acquire the knowledge and analytical skills that will help them make informed decisions as important contributors to the current industrial revolution.

Energy Strategy issues are covered by evening conferences delivered by senior executives or prominent personalities in the world of energy.
