

Energy storage for backup power latvia

Rolls-Royce has received an order from the Latvian transmission system operator Augstsprieguma tīkls (AST) to supply a large-scale mtu battery storage system to secure the Latvian power grid. Together with the other Baltic states, the country will synchronize its energy supply system with the continental European power grid in 2025.

RIGA, Nov. 1 (Xinhua) -- Renewable energy company Utilitas Wind on Friday inaugurated the largest battery energy storage system (BESS) in Latvia to date, local media reported.

Installed at the Targale wind farm in Latvia's western municipality of Ventspils, the system can store up to 20 MWh and dispatch up to 10 MW of electricity.

This fall, the facility will be connected to the Latvian power transmission system, which is a major step in the development of the Baltic country's energy supply system. Investments in the BESS project have so far reached 7 million euros (7.59 million U.S. dollars).

"This is a historic moment in Latvia's modern energy sector. We have been actively working on this project for two years and are proud to contribute to strengthening Latvia's energy security. We are ready to continue our contribution to the development of the energy supply system," Utilitas Wind board member Renars Urbanovics said at the inauguration event.
