Energy storage for backup power liechtenstein

We are active in Renewable Energy, with a focus on the areas of wind power, hydropower, and photovoltaics.

We have many years of project development experience in the energy sector.

NEWSTESVOLT wins leading innovation prize for SMEs again

We have received your registration and have just sent you an email with a confirmation link.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

In the energy domain, there are many different units thrown around - joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources.

How many people do not have access to electricity?

Electricity is a good that adds massive value to modern life: from having light at night; to washing clothes; cooking meals; running machinery; or connecting with people across the world. Many would argue that it is a crucial for poverty alleviation, economic growth and improved living standards.<sup>1</sup>

This interactive chart shows the percentage of people that have access to electricity.

How many people do not have access to clean fuels for cooking?

Having clean fuels and technologies for cooking - meaning non-solid fuels such as natural gas, ethanol or even electric technologies - makes these processes more efficient, saving both time and energy.
