Energy storage for microgrids palestine

Energy storage for microgrids palestine

Mikro ?ebeke, PV Sistemi,, G?? kalitesi,, y?k atma

The increased demand for power worldwide with high quality and sustainability, and the need for clean energy using renewable resources, had put a lot of challenges in modern power systems. Microgrid has the ability to overcome all these challenges with elimination of load shedding. This paper studies a PV station with a local load using real data collected using different monitoring system, and offer a modified design to convert this part of power system into microgrid, the suggested microgrid is tested and operated using MATLAB simulation tool, assuring power sustainability and acceptable THD, electrical and financial results are reported supporting this design.

micrigrid,, load shedding, THD, Power quality

All articles published by MDPI are made immediately available worldwide under an open access license. No special permission is required to reuse all or part of the article published by MDPI, including figures and tables. For articles published under an open access Creative Common CC BY license, any part of the article may be reused without permission provided that the original article is clearly cited. For more information, please refer to https://

Feature papers represent the most advanced research with significant potential for high impact in the field. A Feature Paper should be a substantial original Article that involves several techniques or approaches, provides an outlook for future research directions and describes possible research applications.

Feature papers are submitted upon individual invitation or recommendation by the scientific editors and must receive positive feedback from the reviewers.

Editor's Choice articles are based on recommendations by the scientific editors of MDPI journals from around the world. Editors select a small number of articles recently published in the journal that they believe will be particularly interesting to readers, or important in the respective research area. The aim is to provide a snapshot of some of the most exciting work published in the various research areas of the journal.
