According to the proposal, the solar facility will install 1 million solar panels and ...

Statistics for the 2023 & 2024 Australia Energy Storage Systems (ESS) market ...

Australia's energy sector is undergoing a notable shift with new data from market analyst Sunwiz showing a record surge in utility-scale battery energy storage projects above 10 MWh in 2023, while residential and commercial installations also reached new highs.

From pv magazine Australia

Solar and storage analyst Sunwiz said 2023 was the year of the big battery, with a record number of large-scale battery energy storage systems featuring almost 1 GW/1.5 GWh of combined capacity energized across Australia.

"2023 was the year of the big battery," SunWiz Managing Director Warwick Johnston said, noting that "deployment levels smashed previous records."

The amount of utility-scale battery energy storage capacity energized in 2023 was twice that rolled out in the previous record-setting year of 2021.

"The figures signal the coming of age of the big battery," Johnston said. "Clearly the deployment volume is at a new level, but it's the number of projects being energised that has stepped up to a new level."

Johnston said there were eight large-sale battery projects over 100 MWh energised in 2023, four of which were in excess of 200 MWh capacity, and he expects the sector to deliver another record high in 2024.

"The capacity currently under construction is six times the amount at the same point last year," he said.
