Rimac Energy is oriented toward designing, developing and manufacturing its battery systems in Southeast Europe

"Rimac Energy designs, develops, and manufactures its sophisticated energy storage systems right here in Europe. At the same time we are leveraging the latest technology and bringing our own innovations to the fore and reinventing the way that we create battery energy storage systems," Wasim Sarwar Dilow stressed.

He has represented Rimac Energy, a pioneer in advanced battery energy storage systems (BESS), at Belgrade Energy Forum 2024, which gathered 500 participants from 30 countries.

Rimac Energy is oriented toward designing, developing and manufacturing its battery systems in Southeast Europe including software development, data management and localized support.

It helps localize control, he noted during a panel on accelerating energy storage investments in the region.

Domestic design and manufacturing, in his words, enables BESS to be optimized for the needs of the local market and supports the economy.
