

Environmental sustainability luxembourg

All official European Union website addresses are in the europa domain.

Luxembourg created a High Council of Sustainable Development (HCSD) to coordinate national policy on sustainable development and civil society involvement for SDG action. One of the HCSD's tasks is to act as a platform for new partnerships for sustainable development (UNECE, 2016). Luxembourg's main tools for achieving sustainable development are its National Plan for Sustainable Development (PNDD) and the Report on the Implementation of Sustainable Development (RNDD).

Luxembourg prioritises SDGs 3, 6, 8, 11, 13, 14 and 15 with an environmental dimension.

The current PNDD was adopted by the government in 2010 and was followed by the adoption of the RNDD in 2015. The HCSD has evaluated the latest PNDD and RNDD in terms of their coherence with the 2030 Agenda (UNECE, 2016).

Luxembourg has several sustainable development platforms for stakeholder participation, such as It also cooperates with the "Cercle de Coop?ration", a group of NGOs working on sustainable development (UN DESA, 2017).

In 2018, in the context of preparations for its third PNDD, Luxembourg undertook a stocktaking exercise and gap analysis for the development of its national SDG indicators.

Luxembourg submitted a VNR to the UN in 2017.

An expert working group was set up under the supervision of an Interdepartmental Commission for Sustainable Development for the selection of the national SDG indicators. The group's work has led to the initial selection of 130 national SDG indicators. As a next step, it will conduct a technical evaluation of the indicators to develop the final list of Luxembourg's national SDG indicators (Government of the Grand Duchy of Luxembourg, 2017).

Welcome to the Earth Global Sustainability Index, where Earth examines the policies and actions regarding the environment of every nation on earth. Combining the most respected global indexes on pollution, climate change, policy, energy, oceans, biodiversity we have produced an overall Global Index, which will be updated annually. This is the Global Sustainability Index scorecard for Luxembourg.

Luxembourg is quickly becoming a hub for sustainable finance with a dedicated task force for climate finance.

In 2020, Luxembourg began selling sustainability bonds designed to raise money for green and social projects. By linking sustainability directly to the economic market, Luxembourg is using the market to fund sustainability projects and raise the profile and viability of green finance.
