Europe renewable energy madrid

We're expanding Spain, France, Italy and Greece in Southern Europe to deliver a ~2.5GW pipeline of secured onshore wind projects and a further pipeline of ~2GW of future prospect onshore wind and solar development options. Complementary set of markets France We're building our 28MW Chaintrix wind farm, the first to be built from our French pipeline.

EDP Renováveis (English: EDP Renewables, EDPR) is a renewable energy company registered in Oviedo, and headquartered in Madrid that designs, develops, manages and operates power plants that generate electricity using renewable energy sources.

EDPR was established in 2007 to hold and operate the growing renewable energy assets of parent company Energias de Portugal (EDP Group), Portugal's largest utility company headquartered in Lisbon. EDP Renováveis is the fourth-largest generator of wind energy globally.

EDPR's business includes wind farms and, to a limited but growing extent, solar energy activities. EDPR has continued to grow in recent years and is now present in 13 international markets (Brazil, Canada, Mexico, United States, Spain, Portugal, France, United Kingdom, Poland, Italy, Romania, Belgium and Greece).

EDPR operates in three broad geographic areas: Europe, North America and South America. Its internal composition is organized similarly, being divided into three platforms: Europe and Brazil, North America (including the Canadian and Mexican markets) and Offshore.

It currently owns and operates wind farms in Brazil, Canada, Mexico, United States, Spain, Portugal, France, United Kingdom, Poland, Italy, Romania, Belgium and Greece.

EDPR's main shareholder is EDP Group. EDP holds significant electricity and gas operations in Europe, Brazil and the United States through its various constituent businesses.

EDP listed 22.5% of the company in an initial public offering on Euronext Lisbon in June 2008 at 8.00 Euro per share, upon which it immediately became a member of the benchmark PSI-20 index as its fifth-largest company by market capitalisation.

In spring 2017, EDP launched a buyback offer at 6.80 Euro per share for the minority shares in EDPR, 15% below the original price 9 years earlier, expected to lead to an enforced acquisition of the remaining minority shareholders (squeeze-out).

Today EDPR is 4th in the world in wind energy based on net installed capacity and is consistently ranked in

Europe renewable energy madrid

the top three in terms of growth in the sector.

At the end of 2018, EDPR had added 11.7 GW of installed wind capacity, putting it in fourth place in terms of wind energy production worldwide. In July 2021, EDPR sold three operational wind parks and two plants currently under construction to Onex for EUR 530 million, and bought a 28-MW solar plant in Vietnam.

Discover what Red El?ctrica is, what we do, and why we are the backbone of the electricity system in Spain and the ecological transition.
