

## Ev charger installation residential

As your trusted energy provider, you may approach us for one-stop technical support and power supply solutions for your electric vehicle chargers.

As our customer, you may install electric vehicle (EV) charging facilities in residential buildings and commercial carparks. We offer a range of power supply services to energise your EV charging facilities:

Before you install your EV charger, we can help you to:

Enquire power supply for EV charging facilities

Submit an online enquiry.

We will process your application after we receive all of the required documents. If you do not have these documents on hand, please approach your contractor or engineering consultants.

You should receive a letter regarding your power supply capacity. In the letter, we will advise whether you require power supply upgrade.

To support your application, you should read the following guidelines and ensure that your system meets all of the technical requirements.

### COP 101 Distribution Substation Design

Details the general principles we apply to the design of distribution substations.

Outlines our terms and conditions of electricity supply to our customers.

If you need new electricity supply for your EV charger(s), we can provide:
