AMSTERDAM, October 24, 2023 -- EVBox, a leading provider of electric vehicle charging solutions, has implemented the Payter payment solution, a leader in the field of contactless NFC and Cashless technology, into its charging software, EVBox Everon. Contactless payments for EVBox TronIQ Modular charging stations allow EV drivers to pay for their charging session with their credit and debit card or smartphones directly at the charging station, while third-party roaming authorizes accessible charging from any charging service provider's network. The payment solution is already available at certain EVBox TronIQ Modular charging stations in Norway.

The EVBox Everon software platform in combination with the Payter payment terminal supports payments with Visa, Mastercard, VPay, Apple Pay, Google Pay, and Maestro.

EVBox carried out an Early Adopter Program (EAP) to test and validate the integration of Payter with EVBox Everon charging software with its existing customers. The EAP tested contactless, ad-hoc charging, and third-party roaming payment integration on the EVBox TronIQ Modular charging station. EAP participant Ragde Charge uses EVBox Everon software with the EVBox TronIQ Modular charging stations at their locations throughout Norway.

After successful testing, the end-to-end integration of Payter terminals with EVBox Everon is now available for all EVBox TronIQ Modular charging stations. The cloud-to-cloud integration between EVBox Everon and Payter solutions is compliant with the latest version of Open Charge Point Protocol (OCPP), an open source communication standard for EV charging stations and network software companies. The integration won't rely
