A Premier Foreign Service that Advances Fiji's Interests

To proactively manage Fiji's International relations and diplomacy through a focused Foreign Policy

Minister for Agriculture and Waterways Vatimi Rayalu presented the report, which was endorsed by Cabinet last May, on Friday.

He said it supports their Cop commitments, signalling the beginning of the end of the fossil fuel era, by facilitating a swift, just and equitable transition.

"This is underpinned by deep emission cuts and scaled-up finance, with the over-arching aim of keeping the global temperature limit of 1.5 degrees centigrade (Celsius) within reach," Rayalu said.

The policy has five pillars: energy security and resilience, access and equity, sustainability, efficiency and governance.

But he warned the nation's path to renewable energy is not an easy one, saying Fiji's energy transition will be capital intensive and complex.
