Authenticated and Batch Tested Lithium-Ion Batteries. Find out more about our journey.

You may be wondering why we've made such a bold statement here, but we guarantee after reading this blog you'll be fully onboard.

Our venture into the world of off-grid power began in November 2021 with the addition of EVE LiFePO4 Prismatic cells to our lithium battery range. The introduction of these cells marked a turning point for Fogstar, and paved the way for our Fogstar Drift and Energy ranges.

However, whilst LiFePO4 cells are great for those with an active interest in electronics, for those who don't have the knowledge (or time) to connect and manage prismatic cells, a simpler solution was required.

Enter - the Fogstar Drift LiFePO4 Leisure Batteries.

For Fogstar, leisure batteries are an area of real interest to our MD Ben and the rest of the Fogstar team, especially since we are all van enthusiasts.

Let's have a look at some of the reasons we're confident we've created the UK's best LiFePO4 Lithium leisure battery.

Our Fogstar Drift LiFePO4 leisure batteries were designed in the UK, by our team in Worcestershire.

Having full control of what went into our leisure batteries was incredibly important to us, simply because many of our competitors do not know what is in theirs.

We knew straight away that we wanted to use Grade A EVE LiFePO4 cells as part of the build. The Fogstar team has tested and used these cells in a variety of scenarios - we love them, and so do our customers.
