Biden-Harris Administration Announces \$7 Billion Solar for All Grants to Deliver Residential Solar, Saving Low-Income Americans \$350 Million Annually and Advancing Environmental Justice Across America

EPA announces 60 selectees under Greenhouse Gas Reduction Fund grant competition to deliver solar to more than 900,000 low-income and disadvantaged households nationwide through the President's Investing in America agenda

"Today we're delivering on President Biden's promise that no community is left behind by investing \$7 billion in solar energy projects for over 900,000 households in low-income and disadvantaged communities," said EPA Administrator Michael S. Regan. "The selectees will advance solar energy initiatives across the country, creating hundreds of thousands of good-paying jobs, saving \$8 billion in energy costs for families, delivering cleaner air, and combating climate change."

"Solar is the cheapest form of electricity--and one of the best ways to lower energy costs for American families," said John Podesta, Senior Advisor to the President for International Climate Policy. "Today's announcement of EPA's Solar for All awards will mean that low-income communities, and not just well-off communities, will feel the cost-saving benefits of solar thanks to this investment."

"Sunlight is powering millions of homes across the nation, and we're working hard to ensure Americans everywhere can benefit from this affordable clean energy resource," said U.S. Secretary of Energy Jennifer M. Granholm. "DOE is proud to work alongside our partners at EPA and across the Federal government to help communities access the limitless energy of the sun to light their homes and power their businesses."

"The United States can and must lead the world in transforming our energy systems away from fossil fuels," said U.S. Senator Bernie Sanders (VT). "The Solar for All program - legislation that I successfully introduced

- will not only combat the existential threat of climate change by making solar energy available to working class families, it will also substantially lower the electric bills of Americans and create thousands of good-paying jobs. This is a win for the environment, a win for consumers, and a win for the economy."

EPA estimates that the 60 Solar for All recipients will enable over 900,000 households in low-income and disadvantaged communities to deploy and benefit from distributed solar energy. This \$7 billion investment will generate over \$350 million in annual savings on electric bills for overburdened households. The program will reduce 30 million metric tons of carbon dioxide equivalent emissions cumulatively, from over four gigawatts of solar energy capacity unlocked for low-income communities over five years. Solar and distributed energy resources help improve electric grid reliability and climate resilience, which is especially important in disadvantaged communities that have long been underserved.
