Thinking about energy independence and reducing the stranglehold electricity companies have over you? If you are, then Energy Matters can help you achieve this goal with home battery systems and energy storage. That is solar energy battery power. You can get your FREE solar battery quotes now.

Solar batteries are about taking control of your power generation and consumption. Thousands of Australians have realised they can get more out of their panels than just feeding excess energy back into the grid for a small feed-in tariff. Solar batteries allow solar power generated during the day to be stored for use at night or on cloudy days when solar panels cannot generate electricity. Adding a battery to a residential solar system can double the amount of self-generated electricity consumption!

Energy Matters has been a leader in the renewable energy industry since 2005. We can connect you with our trusted local installers, who will provide up to 3 FREE quotes for your home solar energy system. You can also learn more about home solar panel system sizing [here](#).

Home solar battery systems, also known as battery storage systems or solar battery solutions, are becoming increasingly popular for homeowners looking to maximise their investment in solar energy. These systems essentially function as a giant rechargeable battery, capturing your panels' excess solar energy during the day and storing it for later use. This provides several benefits, including:
